

#	Date	Module	Outcome	Topics	Assigned to	Tasks
Day 1	16-Mar	Git Fundamentals	Understand purpose of Git	What is Git? Git vs GitHub VCS concept install Git git config create GitHub account	Vignesh	→ Create folder utility-lib → create math.js → add 3 functions: add, subtract, multiply → initialize git & first commit
Day 2	17-Mar	Local Repository Workflow	Track changes locally	git init git status git add git commit commit messages git log git diff	Pragatheswaran + Arivu	→ Modify math.js → add divide function → intentionally change multiply logic → use git diff to see change → commit properly
Day 3	18-Mar	Remote Repositories	Sync with GitHub	git clone git remote git push git pull git fetch vs pull	Surya + Sangeeth	→ Push repo to GitHub → clone in another folder (utility-lib-copy) → edit string.js in clone → pull in original repo
Day 4	19-Mar	Branching Basics	Work without breaking main	git branch git switch/checkout feature branches delete branch	Magesh + Surendar	→ Create branch feature/string-utils → create string.js → add capitalize, reverse, trim functions → merge late
Day 5	20-Mar	Merging & Conflicts	Combine team code safely	git merge fast-forward vs no-ff merge conflicts resolution	Praveen	→ Two students edit same line in app.js → merge branches → manually resolve conflict
Day 6	23-Mar	GitHub Collaboration	Real team workflow	Forking Pull Requests code review flow, issues protected branch concept	Mari Ganesh	→ Partner work: fork repo → add array.js with unique, max, min → create Pull Request → reviewer requests change → update PR
Day 7	24-Mar	Undo & Fix Mistakes	Recover from errors safely	git restore git reset (soft/mixed/hard) git revert git commit --amend	Ganesh + Pragatheswaran	→ Add wrong console logs in math.js → commit → remove using amend → break file → recover using reset & revert
Day 8	25-Mar	Rebase Mastery	Clean PR history	git rebase rebase vs merge interactive rebase squash commits resolving rebase conflicts	Gowtham	→ Create 5 small commits editing api.js → squash into one clean commit using interactive rebase
Day 9	26-Mar	Advanced Operations	Handle real-world situations	git cherry-pick git stash stash pop/apply partial commit (git add -p) force push (--force-with-lease)	Vignesh	→ Start editing app.js → stash → fix urgent bug in math.js → cherry-pick bug fix to another branch
Day 10	27-Mar	Debugging & Release Workflow	Production-ready developer	git blame git show git log --graph tags semantic versioning hotfix flow Git Flow feature workflow	Praveen	→ Find who changed a function using blame → create version tag v1.0.0 → simulate hotfix branch & release
